

= Go Green =

It does not matter how slowly you go so long as you do not stop

Reflection

Green Technology is now becoming a trend in our society whereby the pioneers, our beloved Generation Y have been the prevailing activists on the subject of “Saving the Earth”. These are the people that are involved in environmentalism as they have experienced both the “great” and the “not so good” at first hand. These people are also the ones that innovate and take the extra mile to ensure that our planet’s ecosystem does not get to the point of no return.

It is truly heart-shattering to see that the elder ones in our society have not really made an effort to support the organizations that are essentially saving the human race. Hence, I really think that the government should allocate more funds into this sector as it would be the “leap of the century” in advancing our current Green Technology. Everything starts with the government because they are like the control centre of all monetary-related issues, which can be described as the seed of progress in the eye of society.

All in all, I am still utterly optimistic about the works of the environmentalist as long as they continue to expand their influence by spreading awareness to the public. Since we are in the Information Age, I would say that this would not come close on being a challenge for the general public to realize the urgency of the situation, and to have a glimpse into what the future beholds. Assuredly, there will be hope as long as we start being mindful of our actions towards the environment. The future is in your hand, folks!
